

IN THE CLAIMS:

1. (Currently Amended) A method in a data processing system for managing display of a new document, the method comprising ~~data processing system implemented steps of:~~

displaying, in response to receiving a user input indicating that the new document is to be displayed, a list of browser windows including an indication of a presently displayed document in each respective browser window in the list of browser windows; and

~~responsive to a user selection of a browser window from the list of browser windows,~~
~~replacing, in response to a user selection of a browser window from the list of browser windows,~~
a document displayed in the browser window with the new document.

2. (Original) The method of claim 1 further comprising:
promoting the browser window to a top of a window hierarchy.

3. (Original) The method of claim 1, wherein the indication is a document name from a title bar.

4. (Original) The method of claim 1, wherein the indication is a thumbnail of the document.

5. (Previously Presented) The method of claim 1, wherein the list of browser windows, including the indication of the presently displayed document in each respective browser window in the list of browser windows, is displayed in a pop-up menu.

6. (Original) The method of claim 1, wherein the receiving step and the replacing step are performed by a Web browser.

7. (Original) The method of claim 1, wherein the new document is selected from one of a Web page, an image, or a spreadsheet.

8. (Original) The method of claim 1, wherein the user input is received in a currently active browser window.

9. (Currently Amended) A data processing system for managing display of a new document, the data processing system comprising:

displaying means, responsive to receiving a user input indicating that the new document is to be displayed, for displaying on a display of the data processing system a list of browser windows including an indication of a presently displayed document in each respective browser window in the list of browser windows; and

replacing means, responsive to a user selection of a browser window from the list of browser windows, for replacing a document displayed in the browser window with the new document.

10. (Original) The data processing system of claim 9 further comprising:

promoting means for promoting the browser window to a top of a window hierarchy.

11. (Original) The data processing system of claim 9, wherein the indication is a document name from a title bar.

12. (Original) The data processing system of claim 9, wherein the indication is a thumbnail of the document.

13. (Previously Presented) The data processing system of claim 9, wherein the list of browser windows, including the indication of the presently displayed document in each respective browser window in the list of browser windows, is displayed in a pop-up menu.

14. (Original) The data processing system of claim 9, wherein the receiving means and the replacing means are performed by a Web browser.

15. (Currently Amended) A computer program product encoded in a computer readable, recordable-type medium and operable in a data processing system for managing display of a new document, the computer program product comprising:

first instructions, responsive to receiving a user input indicating that the new document is to be displayed, for displaying a list of browser windows including an indication of a presently

displayed document in each respective browser window in the list of browser windows; and second instructions, responsive to a user selection of a browser window from the list of browser windows, for replacing a document displayed in the browser window with the new document.

16. (Original) The computer program product of claim 15 further comprising:
third instructions for promoting the browser window to a top of a window hierarchy.
17. (Original) The computer program product of claim 15, wherein the indication is a document name from a title bar.
18. (Original) The computer program product of claim 15, wherein the indication is a thumbnail of the document.
19. (Previously Presented) The computer program product of claim 15, wherein the list of browser windows, including the indication of the presently displayed document in each respective browser window in the list of browser windows, is displayed in a pop-up menu.
20. (Original) The computer program product of claim 15, wherein the first instructions and the second instructions are performed by a Web browser.
21. (Original) A data processing system comprising:
a bus system;
a memory connected to the bus system, wherein the memory includes a set of instructions; and
a processing unit connected to the bus system, wherein the processing unit executes the set of instructions to receive a user input indicating that a new document is to be displayed, wherein a list of browser windows is displayed including an indication of a presently displayed document in each respective browser window in the list of browser windows; and replace a document displayed in the browser window with the new document in response to a user selection of a browser window from the list of browser windows.
